Blue LED for Bluetooth indication.

Two 1 kΩ resistors are soldered to the “L” and “R” terminals of the amplifier with their opposite ends connected together, turning the stereo signal into mono.

This is the underside of the switch. Note that “NO” and “+” terminals of the switch are connected together.

Note that the pads next to “VOICE” are joined to remove the voice prompts when the module is powered.

Red LED for “CHARGING” and green for “FULL”.

The magnetic Micro USB adapter is plugged to the charging board.
